

Jotunheimen App Flow (React Native iOS/Android app)

- 1. Consent page only on first time load.
- 2. Questionnaire #1 (Demographics) only once per install.
- 3. Questionnaire #2 (After finished tracking/journey) always after a finished tracking.
- 4. App default language = phone default language, but can be changed from app.
- 5. Due to battery life, only points added by the user are saved, no tracking of path between points!

Flightmode/GPS only/Offline/Roaming is crucial for the app. Must be able to switch between modes to save battery but store all data in app, and submit data to database when network available. This app is targeted to non-locals, so they don't want to use roaming too much.

Database:
No admin console, just a link to the file is OK (behind a simple login). The scientists just need the excel file to work with locally.
Data to submit: phone info (unique device ID, model/version, etc), demographics, all tracks/POI's+questionnaires, start point location, end point location.
